EXAMINER'S AMENDMENT

1. Authorization for this examiner's amendment was given in a telephone interview with Todd Melgar on January 11, 2007.

The application has been amended as follows:

Cancel without prejudice withdrawn claims 1-12.

IN THE CLAIMS:

In claim 13 line 9 after "determining the nucleic acid probe" add "amount,"

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: Applicants amendment to require a probe free phosphorous-containing area is novel and unobvious over the prior art. The closest prior is Addison et al. (Antiviral Research, 2000). Addison et al. teach analyzing a probe carrier where the probe carrier is the membrane, the probe immobilized area contains the fragmented plasmid crosslinked to the membrane and the phosphorus containing area contains the fragmented plasmid with the p32 labeled probes hybridized to the plasmid, where the pVg is the quantitation standard and is present in a known amount or predetermined amount). This method of analysis teaches the phosphate containing area is not probe free. The concept of analyzing a probe carrier where the phosphorous containing area is probe free is not taught or suggested in the prior art. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
